

# ThunderCloud Xchange Version 1.2.0.2367 Release Highlights

ThunderCloud Xchange allows teams to upload and share specific files with other teams.

## New Features

**New page grid implemented in the “Shared To My Team” and “My Team Upload” tabs:**

1. Sorts most recently uploaded and shared files at the top by default
2. Allows users to sort files by Game Date, Home Team, Away Team and Shooter
3. Adds page navigation controls at the bottom of the page

## Features

1. **Upload Manager** – Upload and share files based on league, conference and team association
2. **Shared To My Team** – View files and download files shared to the team with which they are associated
3. **My Team Uploads** – View, download, delete, and changes sharing properties of files they have uploaded
4. **User Preferences** – Change the default download directory as well as Download Media Preferences (transcode)

|--|---------------------|---------------------|------------|---------------|---------------|---------------|
| Platform & OS                              | Internet Explorer 8 | Internet Explorer 9 | Firefox 18 | Chrome 24     | Safari 5.1.7  | Safari 6      |
| Windows XP with Java 7 Update 15           | ✓                   | Not available       | ✓          | ✓             | Not supported | Not supported |
| Windows 7 32-bit with Java 7 Update 15     | ✓                   | ✓                   | ✓          | ✓             | Not supported | Not supported |
| Windows 7 64-bit with Java 7 Update 15     | ✓                   | ✓                   | ✓          | ✓             | Not supported | Not supported |
| Mac OS 10.6.8 with Java 6 Update 41        | Not available       | Not available       | ✓          | ✓             | ✓             | Not available |
| Mac OS 10.7.5 with Java 7 Update 13        | Not available       | Not available       | ✓          | Not supported | Not available | ✓             |

- **Java**
  - ThunderCloud Xchange requires Java to run.
  - As listed above XOS requires **Java 7 update 15** or **Java 6 update 41** as the minimum supported revision
- **Firefox**
  - Due to issues identified XOS requires **Java 7 update 15** or **Java 6 update 41** as the minimum supported revision

## **Java Support on Macs**

- Java 7 (latest) on a Mac requires an Intel-based Mac running Mac OS X 10.7.3 (Lion) or later.
- If Java 7 is installed on a Mac OS 10.7.3 system, a 64-bit browser is required (e.g. Safari or Firefox)
  - Chrome cannot be used on a Mac since it is currently 32-bit only.
- Users with Mac OS X version 10.6 and below can go to Software Update under the Apple menu to check for Java updates.
- Users with Mac OS X version 10.7.x or later must go to Java.com to install latest version of Java

### **Current Issues and Limitations**

The product is currently under development and we are working to add additional functionality and address issues as quickly as possible.
